INVITATION TO PAY ADDITIONAL FEES

(PCT Article 17(3)(a) and Rule 40.1)

AANGETEKEND/REGISTERED

Date of mailing (day/month/year) 02/09/2003	Applicant's or agent's file reference SCB/58858001
Date of mailing (day/month/year) 07/01/2003	International application No. PCT/GB 03/ 00034
Applicant NORCHIP A/S	

1. This International Searching Authority

- (i) considers that there are 5 (number of) inventions claimed in the international application covered by the claims indicated ~~below~~ on the extra sheet:

and it considers that the international application does not comply with the requirements of unity of invention (Rules 13.1, 13.2 and 13.3) for the reasons indicated ~~below~~ on the extra sheet:

- (ii) ☒ has carried out a partial international search (see Annex) ☐ will establish the international search report on those parts of the international application which relate to the invention first mentioned in claims Nos.:

1, 2, 11-16 (all partially)

- (iii) will establish the international search report on the other parts of the international application only if, and to the extent to which, additional fees are paid

2. The applicant is hereby **invited**, within the time limit indicated above, to pay the amount indicated below:

EUR 945,00 x 4 = EUR 3.780,00
 Fee per additional invention number of additional inventions total amount of additional fees

Or, _____ x _____ = _____

The applicant is informed that, according to Rule 40.2(c), the payment of any additional fee may be made under protest, i.e., a reasoned statement to the effect that the international application complies with the requirement of unity of invention or that the amount of the required additional fee is excessive.

3. ☐ Claim(s) Nos. _____ have been found to be unsearchable under Article 17(2)(b) because of defects under Article 17(2)(a) and therefore have not been included with any invention.

Gwenaelle J. J. J.

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. Claims: 1, 2, 11-16 (all partially)

Invention 1: Methods to assess the risk of developing cervical carcinoma based on the detection of E6 mRNA AND L1 mRNA. Kits to carry out said methods.

2. Claims: 3 (complete); 11-16 (all partially)

Invention 2: Methods to assess the risk of developing cervical carcinoma based on the detection of E6 mRNA AND p16-INK4a mRNA. Kits to carry out said methods.

3. Claims: 6-10, 12-16 (all partially)

Invention 3: Methods to assess the risk of developing cervical carcinoma based on the detection of E6 mRNA ALONE. Kits to carry out said methods.

4. Claims: 4, 10-16 (all partially)

Invention 4: Methods of screening for the presence of integrated HPV based on the detection of HPV E6 mRNA AND L1 mRNA. Kits to carry out said methods.

5. Claims: 5, 8-10, 12-16 (all partially)

Invention 5: Methods of screening for the presence of integrated HPV based on the detection of HPV E6 mRNA ALONE. Kits to carry out said methods.

The common concept disclosed in the application can be considered as screening methods based on the detection of E6 mRNA.

However, this concept is not new in view of EP0373352 (BEHRINGWERKE AG; 20.06.1990), which discloses a method of detection of HPV E6 mRNA by RT-PCR (see Abstract and pages 2-5).

In view of this prior art, the problem to be solved by the present invention can be considered as providing further uses to the detection of HPV E6 mRNA. The solutions given by the present application are: (a) methods to assess and categorize the risk of developing cervical carcinoma; and (b) methods to screen for the presence of an integrated HPV or a modified episomal HPV genome.

Because no other technical features can be distinguished which, in view of the prior art could be regarded as special technical features in the sense of Rule 13.2 PCT, the ISA is of the opinion that there is no single inventive concept underlying the plurality of claimed inventions of the present application in the sense of rule 13.1 PCT. Consequently, there is a lack of unity, and the methods (a) and (b) are different groups of inventions not belonging to a common inventive

concept.

Considering now the first group of inventions (a), the common concept can be considered as methods to assess the risk of developing cervical carcinoma based on the detection of HPV E6 mRNA.

However, this concept is not new in view of EP0373352 (see above), which also discloses the assessment of said risk by detecting the HPV E6 mRNA (see Abstract and page 2, lines 1-35).

In view of this prior art, the problem to be solved by the present invention can be considered as providing further methods to assess the risk of developing cervical carcinoma based on the detection of HPV E6 mRNA. The solutions given by the present application are the different combinations of marker mRNAs to be detected: HPV E6 and HPV L1 mRNAs; HPV E6 and p16-INK4a mRNAs; or HPV E6 mRNA alone, excluding the detection of any other marker.

Because no other technical features can be distinguished which, in view of the prior art could be regarded as special technical features in the sense of Rule 13.2 PCT, the ISA is of the opinion that there is no single inventive concept underlying the plurality of claimed inventions of the present application in the sense of rule 13.1 PCT.

Consequently, there is a lack of unity, and the methods and products claimed comprise different groups of inventions not belonging to a common inventive concept.

Considering now the second group of inventions above (b), the common concept can be considered as methods to screen for the presence of an integrated HPV or a modified episomal HPV genome by detecting HPV E6 mRNA.

However, this concept is not new in view of EP0373352 (see above), which also discloses that the detection of increased levels of HPV E6 mRNA performed by the method correlates with the integration event of HPV into the host cell genome (see page 2, lines 13-27. In general, the fact that E6 expression is up-regulated upon integration of HPV is well known since many years (see for example Durst et al., 1985; or Pater and Pater, 1985; both cited in page 16 of the description), and it cannot be considered to provide novel and inventive common concept for said methods.

In view of this prior art, the problem to be solved by the present invention can be considered as providing further methods to screen for the presence of an integrated HPV or a modified episomal HPV genome. The solutions given by the present application are the different combinations of marker mRNAs to be detected: HPV E6 and HPV L1 mRNAs; or HPV E6 mRNA alone, excluding the detection of any other marker.

The ISA has searched the first invention listed above 1, 2, 11-16 (all partially).

1. The present communication is an Annex to the invitation to pay additional fees (Form PCT/ISA/206). It shows the results of the international search established on the parts of the international application which relate to the invention first mentioned in claims Nos.:
- see 'Invitation to pay additional fees'
2. This communication is not the international search report which will be established according to Article 18 and Rule 43.
3. If the applicant does not pay any additional search fees, the information appearing in this communication will be considered as the result of the international search and will be included as such in the international search report.
4. If the applicant pays additional fees, the international search report will contain both the information appearing in this communication and the results of the international search on other parts of the international application for which such fees will have been paid.

* Special categories of cited documents :

- *A* document defining the general state of the art which is not considered to be of particular relevance
- *E* earlier document but published on or after the international filing date
- *L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- *O* document referring to an oral disclosure, use, exhibition or other means
- *P* document published prior to the international filing date but later than the priority date claimed

- *T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- *X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- *Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- *G* document member of the same patent family
